

Welcome to the Haven!

Bees are fascinating animals that perform vital pollination service. Here are some tips for a safe visit.

How to enjoy our bees:

- Bees are not flying around looking for people to sting. Their first response to a threat is to fly away.
- Stay on the paths and do not attempt to pick up, catch, or otherwise bother our bees.
- Stay outside the perimeter posted around our beehive.
- Avoid scented products and wear closed shoes. Shirts are also required in the garden.

If you are stung:

- Most bee stings do not require treatment. Remove the stinger and wash the affected area.
- A small number of people have a more serious reaction. If you experience nausea or shortness of breath you should seek medical attention. The reaction to a sting can occur several hours later.
- Most “bee” stings are actually from wasps.
